

MASSIMO NAZARIA

Teacher | Software Engineer | PhD in Computer Science

Rome, Italy | massimo.nazaria@gmail.com | <https://massimo-nazaria.github.io>

Driven by determination and a deep interest in technological evolution, I combine over a decade of cross-domain experience across industry, research, and education. Proficient in a variety of programming languages and frameworks, I quickly master innovative technologies and build maintainable software systems. Through working in multidisciplinary teams as well as teaching in high schools, I have developed strong communication and relational skills, which enable me to tackle technical complexity with collaborative problem-solving.

PROFESSIONAL EXPERIENCE

High School Teacher

Ministry of Education and Merit (MIM)

09/2022 – Present

Nettuno, Italy

- Teaching courses in informatics and applied sciences and technologies, covering basic programming skills, computer networks, security and office productivity tools.

Researcher

Fondazione Bruno Kessler (FBK)

03/2021 – 08/2022

Trento, Italy

- Extended European Space Agency's model-based framework [TASTE](#) by integrating model-checking tools and implementing advanced Qt-based GUIs, while developing formal verification use cases for the European project [VALU3S](#).

Research Technologist

National Institute of Geophysics and Volcanology (INGV)

07/2019 – 02/2021

Rome, Italy

- Contributed to the European project [ChEESE-CoE](#) by implementing high-performance computing tools and by applying cutting-edge machine learning technology to enhance INGV's tsunami early-warning system.

High School Teacher

Ministry of Education, Universities and Research (MIUR)

11/2017 – 06/2019

Velletri, Italy

- Taught design of IT systems and informatics courses to students across two public high schools.

PhD Candidate Researcher

Sapienza University of Rome | Computer Science Department

11/2014 – 10/2018

Rome, Italy

- Contributed to achieving outstanding results within European projects [PAEON](#) and [SmarHG](#) by building full-stack applications and integrating machine learning and data-intensive technologies into a verification framework for complex cyber-physical systems.

Software Engineer

Intecs | Automotive Division

03/2014 – 10/2014

Turin, Italy

- Contributed to the development of a car electronics test bench for Fiat Chrysler Automobiles, boosted software performance by 30% through code restructuring, and implemented a continuous integration workflow.

Software Engineering Intern

Thales Alenia Space

06/2013 – 12/2013

Rome, Italy

- Demonstrated the viability of an innovative model-based tech stack and automatic code generation for mission-critical software by implementing a complete use case over the entire software development lifecycle.

TECHNICAL SKILLS

Programming Languages: C, C++, Python, Java, JavaScript, Bash
Full Stack Web Development, Databases: PHP, HTML, CSS, AngularJS, PostgreSQL
Statistical Data Analysis, Machine Learning: NumPy, Jupyter, TensorFlow, Keras, Scikit-Learn
Formal Verification, Model-Based Design: MATLAB/Simulink, Embedded Coder
Systems & Tools: Linux/Unix, Git, Docker

LANGUAGES

- Italian (mother tongue)
- English (C2)

EDUCATION

Sapienza University of Rome

Rome, Italy

- PhD in Computer Science

2018

- MSc in Computer Science, *cum Laude*

2013
